Activities: state & local level

Target high risk populations through outreach – testing and counseling

Implement interventions (Let's Chat, TARR, prevention with positives)

Case management

General HIV/AIDS education (BBP classes, World AIDS Day event)

Never Share syringe exchange

Outcome

Outputs

Clients are connected to resources and referrals and gain access to testing and counseling services; clients are aware of their HIV status

of HIV tests conducted

of condoms distributed at all locations

Clients have skills and knowledge to reduce risk of spreading HIV or becoming infected; clients gain access to resources and referrals for additional care

of HIV/AIDS and Hep C presentations and attendees

Clients are supported in their infection, continually improving safe sex/injection practices; resources and referrals are provided; disclosure confidence is gained; and compensation for program participation is given. # of case management clients

BBP classes and other events are held to inform members of the public about HIV/AIDS

of BBP classes and attendees

Clients can exchange dirty needles for clean; clients receive education on safer injection; clients have better access to HIV testing

of syringes exchanged

of client visits

Short-term outcomes

High risk populations access HIV services and information when necessary

% increase in HIV tests conducted

Target groups are reached on a regular basis in an environment that is comfortable to them

% increase in HIV/AIDS and Hepatitis C presentations and attendees
